## **Probaris Technologies Added to GSA List of Qualified HSPD-12 Suppliers; Federal Agencies Authorized to Use Trusted Probaris Identity Management System to Comply with Homeland Security Presidential Directive-12.**

PHILADELPHIA--(BUSINESS WIRE)--July 19, 2006--The U.S. General Services Administration (GSA) has approved Probaris as a qualified provider for Homeland Security Presidential Directive 12 (HSPD-12) implementations. Based upon this qualification, Federal agencies are authorized to buy the company's trusted HSPD-12 software product, SP/PIV and experienced implementation consulting services. HSPD-12 is the Presidential policy, mandated in August 2004, for a common identification standard for federal employees and contractors. Federal agencies have until October 27, 2006 to comply with the HSPD-12 requirements.

"Probaris SP/PIV offers the most sophisticated security and identity management features available on the market today. The Probaris SP/PIV business processes are easily configurable to meet the specific needs of the issuing agency," said Jim Bensman, CEO of Probaris Technologies.

Probaris SP/PIV is unique among the products available in the secure credential issuance market. It provides a feature-rich business process management (BPM) system, and a credential issuance identity management system (IDMS) in a single software platform. The product is complete with pre-configured processes for credential issuance, reissuance, revocation, and termination. The product enforces separation of roles and provides for automatic generation of unique identification numbers for PIV credentials making it a natural fit for the Government's HSPD-12 and e-Authentication requirements.

Probaris' SP/PIV is a commercially available software product that includes a central data repository and a web services infrastructure. This architecture enables SP/PIV to serve as the integration hub for the complete set of technology components needed to produce a PIV compliant identity credential.

Probaris Technologies, Inc. is an early leader in the Federal government's HSPD-12 mission fulfillment with installations at multiple agencies including the Social Security Administration, Bureau of Land Management, and the Department of Interior.

### About Probaris

Probaris develops and markets Probaris SP/PIV -- the leading software platform for managing personal identity verification (PIV) processes. SP/PIV is built on Probaris' Secure Process(R) (SP), the industry leading web platform for secure business process management. The platform supports origination, routing, and management of web-enabled business processes, and the rapid integration of these processes with legacy applications and databases. Probaris offers the most flexible, scalable, and extensible business process solution for HSPD-12.
